

Collections Catalogued & Databased

It is not uncommon for the serious Collector to become completely engaged in the process of collecting and developing their connoisseurship.

And at some point the serious Collector becomes aware the collection has outpaced their ability to organize important and critical details needed for proper record keeping.

This service is designed for the Collector who wishes to have their collection inventoried and documented. After the initial catalogue is developed, the database and the software are delivered. Upon request, we retain a copy for the convenience of periodic updates.

This database allows the Collector to quickly and easily...

- Document artwork (objects) for insurance and organization
- Store all records related to artwork and objects, including: art (object) details, artist information, reviews, notes, sales history, appraised values and authentication
- Assign pictures for uncomplicated visual reference
- Find, sort, and view artwork (objects) in multiple ways for any purpose
- Manage 'sold to', 'purchased from' and 'loaned to' records
- Recall donated items for tax reporting purposes
- Print insurance reports, inventory summary reports, portfolios, art (object) details, artist details, labels and more

The following page illustrates the comprehensiveness of the database and reporting capabilities.

We welcome calls to explore your particular needs.
